CALIBRATION

Valid To: July 31, 2025

Certificate Number: 2806.01

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following calibrations^{1,17}:

I. Acoustical

Parameter/Equipment	Range	CMC ² (±)	Comments
Sound Level Meter	Up to 115 dB	0.64 dB	Fluke 5730A with microphone

II. Chemical Quantities

¹ This laboratory offers commercial calibration, dimensional testing, and field calibration services.

² Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of $k = 2$. The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.

³ Field calibration service is available for this calibration. Please note the actual measurement uncertainties achievable on a customer's site can normally be expected to be larger than the CMC found on the A2LA Scope. Allowance must be made for aspects such as the environment at the place of calibration and for other possible adverse effects such as those caused by transportation of the calibration equipment. The usual allowance for the actual uncertainty introduced by the item being calibrated, (e.g., resolution) must also be considered and this, on its own, could result in the actual measurement uncertainty achievable on a customer's site being larger than the CMC.

⁴ In the statement of CMC, L is the numerical value of the nominal length of the device measured in meters. In the statement of best uncertainty, R is the numerical value of the resolution of the device measured in micrometers; LSVD represents the least significant valid displayed division of the device subject to calibration; RPM is revolution per minute, ORM is oscillation per minute.

⁵ In the statement of CMC, R is the numerical value of the resolution of the angle measuring devices measured in degrees or in minutes.

⁶ Calibrated by P.K. Labs

⁷ This laboratory meets R205 – *Specific Requirements: Calibration Laboratory Accreditation Program* for the types of dimensional tests listed above and is considered equivalent to that of a calibration.

⁸ Including weighing of distilled water (density 1 g/cm³) and conversion to the volume units.

⁹ Compliance according to the policy of the P.K.Labs

¹⁰ Compliance of the setting or limit gauges according to the policy of the P.K.Labs.

¹¹ Calibration can be also performed to manufacturer or specific customer requirements.

- ¹² Calibration of the compression machines for testing of hardened concrete (Israeli standard 26 part 4-1-is the Hebrew version)
- ¹³ Calibration of micrometers "Tri-O-Bor"(internal micrometer with three-point contact) according to test instruction VDI/VDE/DGO 2618 as an expansion of DIN 863
- ¹⁴ Calibration of the vehicles for food transport in a controlled temperature (Israeli standard 1291 is the Hebrew version)
- ¹⁵ The stated measured values are determined using the indicated instrument (see Comments). This capability is suitable for the calibration of the devices intended to measure or generate the measured value in the ranges indicated. CMC's are expressed as either a specific value that covers the full range or as a percent or fraction of the reading plus a fixed floor specification
- ¹⁶ The type of instrument or material being calibrated is defined by the parameter. This indicates the laboratory is capable of calibrating instruments that measure or generate the values in the ranges indicated for the listed measurement parameter
- ¹⁷ This scope meets A2LA's *P112 Flexible Scope Policy*.
- ¹⁸ In the statement of CMC, percentages are percentages of reading, unless otherwise indicated.

Accredited Laboratory

A2LA has accredited

P.K. CALIBRATION & CONSULTING LABS LTD

Tefen, ISRAEL

for technical competence in the field of

Calibration

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 *General requirements for the competence of testing and calibration laboratories*. This laboratory also meets R205 – Specific Requirements: Calibration Laboratory Accreditation Program. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 28th day of June 2023.
